PROFESSIONAL SUMMARY

Software Engineer specializing in full-stack development with ASP.NET Core and React, experienced in building and deploying production-grade applications using Docker and CI/CD pipelines. Proven track record of developing internal tools and AI-integrated solutions, with a strong focus on scalability, performance, and delivering measurable business impact.

WORK EXPERIENCE

Programmer/Analyst <i>DHI Computing Service, Inc.</i>	Aug 2026 – Present <i>Midvale, Utah</i>
- Develop full-stack banking applications using C# (.NET) and Angular, supporting customer-facing platforms - Collaborate across front-end and back-end teams, adapting to shifting priorities to maintain development velocity - Leverage AI-driven tools and automation to accelerate development workflows and improve system efficiency - Analyze business and technical requirements to design scalable, maintainable solutions for financial institutions	
Business Development & Technology Engineer Internship <i>EIS Forensic</i>	May 2026 - Aug 2026 <i>Centerville, Utah</i>
- Lead strategic communications and client relationships to maximize company visibility - Integrate AI solutions, build CI/CD pipelines, and expand LinkedIn presence - Designed and deployed a company website using React and ASP.NET Core - Built internal tools that streamlined client communication and reduced manual workflows	
Software Engineering Internship <i>Dynamic Integrations</i>	Sep 2024 – May 2025 <i>Ephraim, Utah</i>
- Gained hands-on experience with Docker for in-development testing with databases - Worked with clients to refine software requirements and presented projects to potential customers at a convention - Developed skills in explaining technical decisions and project contributions clearly to diverse audiences - Collaborated with clients to gather requirements and present software solutions to stakeholders	

PROJECTS EXPERIENCE

EIS Client Database <i>Internal CRM & Operations Platform</i>	May 2026 - Present
- Built a full-stack internal CRM platform for EIS Forensic using React 19 with TypeScript, .NET 10 C# backend, and PostgreSQL, following a test-driven development workflow with Vitest and TUnit - Implemented Microsoft OAuth (Azure AD) for authentication, domain-restricted sign-in, and role-based access control with admin-provisioned user roles - Designed and deployed a CI/CD pipeline using GitHub Actions with automated linting, testing, and self-hosted production deployment via Docker Compose	
ITIN <i>Itinerary & Trip Planner</i>	Aug 2025 - May 2026
- Organized in an AGILE / SCRUM environment, gaining experience as a SCRUM MASTER - Hands-on experience as a full-stack developer, Back-end in C#, Front-End in React, and Database with PostgreSQL - Implemented Local deployment (Docker), Kubernetes deployment for testing, and Production deployment in Azure	
Spotify Agent <i>Spotify AI Manager</i>	Aug 2025 - Dec 2025
- Implemented a CI/CD pipeline for autonomous testing, linting checks, and deployment to testing environment and production - Implemented Artificial Intelligence as an Agent to manage Spotify accounts based on user input, implemented the Agentic loop - Experience with Authorization and Authentication using OAuth	
Consilium <i>Student Planner App</i>	March 2025
- Developed using .NET MAUI, implemented with ASP.NET CORE API and PostgreSQL Database - Spearheaded multiple rounds of structured user testing to evaluate the application's usability - Worked integrally with a dynamic, four-developer team in an agile environment	

EDUCATION

Snow College <i>Software Engineer Bachelor's Degree</i>	Ephraim, Utah 2022 - 2026
